Whether it's easy access to the counter display thanks to the extra-flat weighing platform or the printer unit's discreet, ergonomic position on the counter rail: The modular concept behind the METTLER TOLEDO FreshWay V doesn't leave anything to be desired when designing shopfitting at your POS for the perfect purchasing experience.

METTLER TOLEDO

FreshWay V

Flexible. Modular. Versatile.

The perfect solution for every checkout and set of scales: METTLER TOLEDO FreshWay V is the first choice for anyone whose store set-up and service concept needs more flexibility and individuality – whether it's for weighing products at a classic supermarket, a gourmet foods store or at the hot foods counter.

The modular component concept means that ergonomics and process optimization go hand in hand with the FreshWay V. A touchscreen operator display, customer display, printer, base module with integrated scales, or terminal plus an extra-flat weighing platform – each module can be put wherever you want it. The FreshWay V from METTLER TOLEDO makes it extremely easy for food retailers to adjust their weighing and serving procedures to meet the specific requirements at their workplace for counter and checkout applications. The FreshWay V has a high degree of flexibility, making it perfect for any sales concept.

Innovative Design

Whether in the standard edition or as the Flat Edition with an extra-flat weighing platform and separate processing unit – the FreshWay V does away with the inconvenience of having to cut out nooks and crannies in your counter setup. For you as a retailer, this means more flexibility when adapting your service counters to sales requirements. As a result, the FreshWay V will permanently reduce the risk of high follow-up shopfitting costs.

Perfect Sales Image

The Fresh Way V's modern design has a rigorous focus on hygiene and functionality and is setting new standards for an optimal appearance at the point-of-sale. The modular device concept and details such as the continuously adjustable touchscreen display for the operator and dirt-resistant, non-stick surfaces make operation more ergonomic and simple all around.

Sales-Boosting In-Store Marketing

The FreshWay V is a high-performance scale with power reserves for graphical and CPU-intensive digital signage applications that will be sure to freshen up the POS. The bright 12.1 inch customer screen with high-resolution is the ideal media platform for increasing sales success with sales-boosting promotions and compelling branding campaigns.

Stress-Free Work

Employees can use the Flexible Scale Display System (FSDS) to adjust the height and tilt angle (up to 30°) of the capacitive touchscreen to suit their individual requirements to enable quick, error-free and stress-free operation.

Robust Housing

The FreshWay V is robust and durable. The flat weighing platform of the basic model is quick to remove and easy to clean, allowing for maximum levels of hygiene. Thanks to height-adjustable and lockable feet, FreshWay delivers precise weighing results at all times.

Extra-Flat Weighing Platform

For even more freedom of movement and easier access into your counter display: The FreshWay V is also available as a Flat Edition with an extra-flat weighing platform (CWP).

Separate Processing Unit

A POS setup without limits: With the Flat Edition, you can have the separate computer unit disappear beneath or inside your counter.

Superior Hygiene

The borderless touchscreen stops edges getting dirty. The base and scale terminals do away with unhygienic fans and instead save energy by silently diverting excess heat through the casing – no maintenance needed! All cables stay out of sight.

Precise Installation

Versatile, reliable, high-quality: The FreshWay V is compatible with installation and bracketing systems from Ergonomic Solutions®. That's how our FreshWay V will integrate perfectly into your individual work set-up.

Perfect View for Customers

With its high-resolution LED backlight technology, the customer display features impressive viewing angle stability and outstanding brightness and contrast values for optimum visibility and legibility.

Rapid Roll Changes

The two inch ticket printer has an automatic paper cutting function and quickly prints all of the items purchased onto paper. Rolls can be changed in no time by dropping them in via the flap that is accessed from above and opens outwardly.

Optional Linerless Printing

No stapling plus excellent hygiene: With the 2-inch Linerless label printer, you can print labels directly at the sales counter without any additional equipment – and with all the advantages of the FreshWay V receipt printer.
